

Do You Qualify?

Company Description Sundown Inc Nature Preserve is dedicated to the protection and stewardship of natural habitats and the wildlife that inhabit them. The preserve focuses on conservation, education, and responsible research to promote long-term ecosystem health. Team members collaborate across disciplines to provide high-quality animal care while supporting habitat restoration and public outreach initiatives. The organization values ethical practices, evidence-based decision making, and a culture of respect, inclusion, and safety. Prospective team members join a mission-driven environment where animal welfare and environmental sustainability guide everyday work.

Role Description The Veterinarian will provide comprehensive medical care for wildlife and domestic animals associated with Sundown Inc Nature Preserve, including diagnosis, treatment, preventive care, and health monitoring. Day-to-day responsibilities include performing examinations, prescribing medications, developing treatment plans, documenting medical records, and collaborating with animal care staff on nutrition, enrichment, and rehabilitation protocols. The role involves advising on disease prevention programs, supporting regulatory compliance and biosecurity measures, and contributing to protocols for humane handling, transport, and release. The Veterinarian will also participate in remote consultations, case reviews, and interdisciplinary meetings, and may support educational content and training for staff and volunteers. This is a full-time remote role, with virtual collaboration and occasional coordination with on-site teams and partner organizations.

Qualifications

Doctor of Veterinary Medicine (DVM or equivalent) from an accredited institution; active veterinary license in relevant jurisdiction(s).
Experience in small animal, wildlife, or zoo medicine, with strong skills in diagnosis, treatment planning, and preventive care.
Proficiency in maintaining accurate electronic medical records and using telemedicine or remote consultation tools.
Knowledge of animal welfare standards, biosecurity practices, and applicable laws and regulations related to wildlife and conservation.
Strong interpersonal, communication, and collaboration skills for working with multidisciplinary teams, volunteers, and partner organizations.
Ability to work independently in a remote environment, manage multiple cases and projects, and make sound clinical decisions.
Commitment to equity, inclusion, and non-discriminatory practices in animal care, team interactions, and community engagement.

Experience with conservation medicine, One Health, or research in natural preserve or similar settings is beneficial.

Willingness to participate in ongoing professional development and adapt to evolving clinical and conservation best practices.
